

Berky-pushboat type 6650 with barge type 6850

The 2-steering system, the fully hydraulic speed adjustment and the direct changing from forward to backward allow for an exact and trouble-free coupling and movement.

The powerful Diesel motor transfers an enormous thrust and speed to the winding-free driving augers.

Boat's body: The dimensionally stable hull is made of sand-blasted high-quality shipbuilding plates with priming coat and a protective seawater-resistant coating. Sophisticated construction in line with the shipbuilding rules and provisions of the German Lloyd.

The telescopic outriggers assure a special stability for dredging or loading and unloading works. Channeled, nonskid plates and a continuous railing ensure the operating team to have a safe working ambience.

HYDRAULICS:

The working boats are provided with well tried aggregates with a fully hydraulic function which assure a high performance and a trouble-free use.

Adjustable, powerful reciprocating pumps and gear pumps ensure power reserves and a long-standing working life.

Hydraulically or electric pilot-controlled proportional valves allowing a fine and multiple control serve to a fine and multiple control.
